

About the Program

Charge@Work is a United States Department of Energy funded program designed to bring electric vehicle (EV) charging to American workers by engaging workplaces, public officials, and community leaders to start workplace charging programs. Together we can support cleaner air, a healthier environment, greater local energy independence, and responsible community stewardship.

Charge@Work is your workplace charging concierge.

We can support your workplace charging project from idea to implementation with our technical, planning, installation, and incentive program expertise.

Join Us

Join workplaces, public officials, and workers across the country who are making workplace charging the new normal.

Charge@Work and our partners can provide technical, practical, and financial tailored solutions like connecting you with federal and local incentive programs, creating a site plan, securing cost estimates, identifying which technologies work best for you, measuring worker interest in EVs, creating a plug share plan, and much more!

Visit our website at www.chargeatwork.org to receive more information and sign the nonbinding Charge@Work pledge today!

Workplace charging can support:

- **Cleaner air, healthier environment**
- **Greater local energy independence**
- **Responsible community stewardship**
- **Fair and equal access to EV charging**
- **Positive business leadership**
- **Clean job creation**
- **Cost savings for drivers**
- **Employee satisfaction and retention**
